

AflaChat — System Architecture & Data Flow

Website, mobile app, and admin dashboard — all backed by one Express API.

Route map			
ROUTE	USED BY	AUTH	PURPOSE
GET /api/health	Uptime checks	Open	Health check
/api/session	Website + App	x-app-key	Start/end a chat session
/api/chat	Website + App	x-app-key	Send a message, get an LLM answer (Groq + KB context)
/api/events	Website + App	x-app-key	Offline-attempt telemetry
/api/feedback	Website + App	x-app-key	Community free-text feedback
/api/offline	App (mostly)	x-app-key	Offline knowledge-base fallback logging
/api/auth/*	Website admin	Open (login) / Bearer	Admin login, session, profile, password
/api/users/*	Website admin	Bearer	Manage admin accounts (CRUD)
/api/analytics/*	Website admin	Bearer	Overview, timeseries, languages, topics, geo, quality, platforms, sessions, feedback, events, unanswered

ROUTE	USED BY	AUTH	PURPOSE
<code>/api/contact</code> <code>/api/contact/submissions</code>	Website (planned)	Not built yet	Contact form intake — website form currently only simulates submission; admin UI is built and waiting

 x-app-key — chat/session/feedback/events/offline  Bearer token — admin dashboard only  Not yet wired up

AflaChat — generated from repo inspection of aflachat-web, aflatoxin-master, and backend.
